

DEMANDBASE

Data Analyst Intern (Data Engineering)

Job Location: Hyderabad

About Demandbase

Demandbase is the leading Account-Based Go-to-Market (GTM) platform, helping some of the world's largest and fastest-growing companies including Accenture, Adobe, DocuSign, and Salesforce identify, engage, and grow their most valuable accounts.

As pioneers of the Account-Based Marketing (ABM) category, Demandbase has spent more than a decade transforming how B2B organizations align sales and marketing around target accounts. Today, Demandbase is a critical component of the modern B2B technology stack, enabling companies to accelerate revenue growth through data, intelligence, and AI-driven insights.

Our platform empowers business leaders to:

- Discover and prioritize new market opportunities
- Identify and engage the right buyers
- Improve customer data quality and coverage
- Drive more effective go-to-market execution

Powered by AI and one of the industry's most comprehensive B2B datasets, Demandbase delivers highly relevant and reliable buyer signals that help organizations make smarter decisions and drive measurable business outcomes.

At Demandbase, we believe technology should create meaningful business value. We are committed to building innovative solutions that redefine how companies understand, engage, and grow customer relationships. We embrace bold thinking, move with urgency, and continuously challenge ourselves to solve complex problems for our customers.

Just as importantly, we are deeply invested in our people. We are committed to fostering an inclusive, collaborative culture where employees can grow their careers while building world-class technology. With offices in the San Francisco Bay Area, New York, Seattle, and teams across the UK and India, Demandbase has consistently been recognized as one of the best places to work and continues to attract passionate, driven, and talented individuals who want to make an impact.

About the Role

This role focuses on leveraging data, analytics, and visualization techniques to generate business insights and support data-driven decision-making. The analyst will work with large datasets to identify trends, monitor key business metrics, and develop dashboards and reports that improve data accessibility and reporting efficiency.

The role involves collaborating with stakeholders to understand business requirements, performing data validation and analysis, and supporting the development of scalable reporting solutions. Exposure to SQL, data visualization tools, and basic automation techniques will be important for ensuring data accuracy and operational effectiveness.

The analyst will also have opportunities to explore emerging technologies, including AI and Generative AI, to enhance analytical workflows and uncover new business insights. With a strong focus on continuous learning, problem-solving, and analytical thinking, this role provides a foundation for building expertise in advanced analytics, machine learning, and business intelligence.

Key Responsibilities

Big Data Analysis & Insights

- Analyze large datasets to identify trends, patterns, and insights using SQL, Python, and analytical techniques.
- Support data validation, exploratory analysis, and anomaly detection activities.
- Perform statistical analysis, trend identification, and anomaly detection using Spark, SQL, and Python.
- Optimize Athena, BigQuery, or Snowflake queries for cost-effective data retrieval.
- Apply data mining techniques to uncover hidden patterns in massive datasets.

Reporting & Data Visualization

- Build and maintain dashboards, reports, and visualizations using tools such as Grafana, Datadog.
- Monitor key business and operational metrics and communicate insights effectively.
- Support automation of recurring reports to improve reporting efficiency and data accessibility.

Data Pipeline & Query Optimization

- Work with ETL pipelines on distributed data processing frameworks like Apache Spark, Databricks, or Flink.
- Improve query performance for Athena, Presto, Trino, or BigQuery by optimizing partitioning and indexing strategies.
- Ensure data fidelity, consistency, and efficiency in high-throughput data environments.

Collaboration & Communication

- Work closely with data engineers, platform teams, and business stakeholders to define analytical requirements.
- Translate complex technical insights into actionable recommendations for product and business teams.
- Communicate findings effectively through visualizations, presentations, and reports.

Automation & Continuous Improvement

- Identify opportunities to automate repetitive analytical and reporting tasks.
- Support data quality monitoring and validation processes.
- Use AI tools, Generative AI, and analytical tools to improve productivity and insight generation.
- Contribute to process improvements that enhance data reliability and operational efficiency.

Required Qualifications

Must-Have Skills

- 0–2 years of experience in data analysis, reporting, or business analytics (internships and academic projects included).
- Strong understanding of SQL for querying and analyzing data.
- Basic proficiency in Python for data analysis and automation.
- Experience working with spreadsheets and data visualization tools
- Ability to analyze datasets, identify trends, and generate actionable insights.
- Strong attention to detail and commitment to data quality.

Preferred Qualifications

- Exposure to cloud-based analytics platforms such as Athena, BigQuery, Snowflake, or Databricks.
- Basic understanding of big data concepts and distributed processing frameworks such as Spark.
- Familiarity with ETL concepts, data pipelines, and data modeling fundamentals.
- Exposure to AI/ML concepts, predictive analytics, or Generative AI tools.
- Experience with dashboard creation and reporting automation.
- Knowledge of data governance and data privacy fundamentals.

Behavioral & Soft Skills

- Strong analytical and problem-solving mindset.
- Curiosity to explore data and uncover business insights.
- Effective written and verbal communication skills.
- Ability to collaborate with business and technical stakeholders.
- Self-motivated learner with a willingness to work in a fast-paced environment.
- Ability to manage multiple tasks while maintaining quality and accuracy.

Basic Qualifications

- Bachelor's degree in Computer Science, Engineering, Information Systems, Statistics, Mathematics, Economics, or a related field.
- Demonstrated experience through internships, academic projects, or coursework in analytics, reporting, and data visualization.

Why Join Us?

- Work with large-scale datasets and solve real-world business problems using data and analytics.
- Partner with engineering, product, and business teams to deliver insights that drive decision-making and customer impact.
- Gain hands-on experience with modern data platforms, cloud technologies, AI-powered analytics, and scalable data processing frameworks.
- Build a strong foundation in analytics, automation, and data-driven problem solving while working on high-impact initiatives.
- Learn from experienced professionals and grow your career in a fast-paced, innovation-driven environment.
